

Paper Playground  
Marker Slider Assembly Notes

Attach a piece of fun foam or other thick material to give the color circle some height. The circle should slide easily along the track.

If using the length of the program paper to parameterize values, align the top and bottom of the slider bars with the top and bottom program dots.

Align the slider bars so that they do not obscure the program dots.

When creating the marker slider circles, be sure to use the same red, green, blue, and black tones as the program dots. If necessary, print a larger version of a program page and cut out individual circles to use. The marker circles must be at least 1.5x larger than the program dots.
